

# Are you aware **your dog** can **spread** disease to sheep?

**Sheep Measles is something that is not a health issue, but can produce unsightly cysts in sheep meat. Farmers can then have sheep downgraded or condemned, affecting their livelihood.**

**It only costs a couple of dollars for either Droncit or Wormicide tablets, from your vet. Your dog should be dosed monthly if regularly going on or near where sheep are grazed, and at least 48 hours prior.**
