Monthly dog treatment is the cheapest and most effective control for sheep measles.

Dogs should be dosed at least 48 hours before entering sheep farms or going onto sheep pasture.

Have dogs? Heading to the country?

Just remember the basic rules, so that the Farmer's livelihood is not compromised.

1. **Always ask the Farmer** before going onto his land
2. **All dogs need to be dosed** for Sheep Measles* at least 48 hours prior (or within a month) of going
3. **"Scoop your Poop!"** – as always, make sure you have enough bags for the job
4. **Controlling dogs** - dogs should be under control at all times when not under supervision

Check our website for Vets that stock these tablets (Droncit or Wormicide).

sheepmeasles.co.nz/find-a-vet

If your vet is not there and would like to be, they can get in touch – we would love to get urban vets online.

Call us on 0800 222 011
sheepmeasles.co.nz/other-dog-owners

* Dosing for Sheep Measles is with a very reasonably priced Praziquantel Drug such as Droncit or Wormicide. Alternatively an All Wormer will also do the trick, and whilst more expensive, it will cover other parasites.

SHEEP MEASLES CERTIFICATE

Pet dogs can transfer disease to sheep. If you're going near the country please help support our Farmers – dose your dogs.

Sheep Measles is prevented by dosing dogs.
It's that simple... AND IT'S CHEAP!
